The TouchMonitor TM9 range enters a new level of professional audio metering in terms of precision, performance, efficiency and flexibility. The units are equipped with high-grade 9" touch screens, an easy-to-use graphical user interface, and several audio interfaces.

TouchMonitor TM9 handles audio signals using analog, AES3, AES3id and, as an option, 3G SDI audio interfaces. Audio channels deembedded with the 3G SDI option can even be mixed with other audio inputs (up to 32 input channels can be displayed simultaneously).

Graphical User Interface

The TouchMonitor's graphical user interface is controlled simply by the touch of your finger. Instruments can be scaled, randomly positioned and combined for optimum utilization of the available screen space. Multiple instruments of the same type, assigned to different input channels and configurations, can be displayed simultaneously. A comprehensive on-screen help feature lets the user configure setup changes with ease.

Licences

A totally modular software concept means that only those features have to be purchased that are actually required. This lets you define the functionality of an individual TouchMonitor that suits your needs best. At any time, software modules with new instruments and functions can be added simply by purchasing and activating the corresponding licences.

Software

Standard Software

Every TouchMonitor comes with a basic software package. Beside the signal processing (two channels at a time) and the control functions this software includes a Stereo-PPM with analog scales (DIN5, Nordic, British Ila, British IIb) and digital scales (0 to -60 dB, +3 to -60 dB TruePeak, DIN5, Nordic, British Ila and IIb), peak hold, peak memory, Over indicators, phase correlation meter and a global keyboard for simultaneous control of defined functions in multiple instruments and for preset recall. It also allows the external control with the integrated GP IO interface. Optionally, different software modules are available as licences.

Software Modules (Licences)

Software modules can be ordered as licences either together with the order of the main unit and the selected audio interface or at a later point in time. Together with the order of the main unit the licence will be activated at delivery.

When a licence is needed at a later point in time, the order process is started from the "Licences" menu of the TM9 unit. A device-specific file for forwarding to RTW is created by the unit. RTW will send back a corresponding file with the activated licence for exactly this unit.
