The Tango Roller is neither a slider nor a glider but it has the same functions. The Tango is a roller as it runs on special wheels. The two main disadvantages of most slider/glider systems are the noise and more importantly the rough and noticeable movement.

The Roller with wheels has a smoother travel performance than a slider using ball bearings.

We designed a lightweight roller system for camera weights up to 15 kg / 33 lbs.

The weight limitation is due to a much lighter design than its big brother.

Therefore our base kit weighs as little as 8 kg / 17.6 lbs and includes a 1.50 m length of track, the Tango roller and the end stops.

Standard accessories like tripod/stand adapters, protective tubes etc. are available.

professional camera support

Track lengths are available in 1 m and 1.2 m.
The track can be connected providing you with extra long transition shots.
It can also be operated upside down in an underslung mode.
